

Our Environmental Policy

At Burleydam Garden Centre, we take our responsibility towards caring for the environment very seriously. We are lucky to be situated in a lovely part of Cheshire and we want to do our best to preserve its natural beauty.

We realise that our activities have an impact on our surroundings and we are working towards reducing that impact and protecting our environment as much as we possibly can.

Compliance with Legislation

We will meet or exceed the requirements of relevant legislation and appropriate codes of practice.

Products and Services

We will:

- Ensure the products we sell have as minimal an adverse effect on the environment as possible
- Stock an appropriate range of environmentally friendly products and provide accurate information to encourage our customers to make environmentally sound choices
- Consider environmental issues when purchasing products and services
- Source products locally wherever possible, so as to reduce the environmental impact of distribution

Energy efficiency and waste management

We will:

- Aim to operate in an energy efficient manner by, amongst other initiatives, recycling water and implementing LED technology
- Recycle by example; we compress and compact all recyclable waste packaging, such as cardboard and plastics, which is then sent to recycling outlets
- Use contractors who further recycle our waste ; according to figures from Q4 2014, 100% of this waste was recycled or otherwise recovered by our chosen waste contractor

Communication and training

We will:

- Communicate our environmental policies to all staff and encourage them to contribute to its continuing development.
- Encourage our team to consider themselves responsible for their impact on environment and ensure they have the training to minimise this impact.

We believe that good environmental management makes sound business sense and it is therefore seen as a core business consideration. We aim to achieve a high standard of responsible care for people and the environment whilst maximising business efficiency and growth
